Managed Data

Why Cloud?

-  Predictable monthly pricing with a subscription-based delivery
-  All maintenance and security updates included as part of your subscription
-  Data is stored in Australian data centres and it is accessible anytime, anywhere

About CloudRecover

With 9+ petabytes of data under management, CloudRecover has one of the largest private clouds in Australia. Since 1999, we serve organisations from SMB to Enterprise and Government throughout the Asia Pacific region, with our secure Australian data centres.

We offer **flexibility, security**

CloudRecover's enterprise grade solutions from HPE are delivered via the cloud on a simple subscription-based model. Organisations receive maximum performance and security, with the flexibility to customise services to your unique needs.

All solutions are fully managed, using PCI compliant backup software and ISO 27001 certified data centres, with high availability and 24x7 dedicated support available.

HOSTED FOR FREE UNTIL 31ST DEC

HPE Content Manager

HPE Content Manager is a governance based enterprise content management (ECM) system, considered a vital business application within an organisation. It empowers users to capture, manage and access documents from creation to disposal. The majority of users rate HPE Content Manager 4 or 5 stars out of 5 in satisfaction surveys!

We offer high availability

We provide dedicated virtual private cloud servers for HPE Content Manager in Australian data centres. Your data will be protected and stored in mirrored, geographically dispersed, Federal Government approved data centers with coveted global certification standards.

The cloud servers are on an isolated network reserved for the customer. With a hosted solution, you can simplify your HPE CM experience with NO need to manage complex infrastructure and licensing models.
